

*Schools and families can work together to reduce problem behaviors in children.*

## Functional Behavioral Assessment

Most children have occasional behavior problems with self-regulation, but for some children with sensory or emotional disabilities conforming to behavioral expectations for a long period of time can be a struggle.

School can present a significant challenge for these children, so they often spend a lot of time out of the classroom due to disruptive behaviors. If your child is struggling with behavior challenges at school, you can work together with the school to make it possible for your child to spend more time with their peers. One way is to develop a behavior plan based on a Functional Behavioral Assessment (FBA).

Many problem behaviors in school reflect your child's reaction to transitions, change of routine, undesired work or the environment. Understanding the cause (or function) of a behavior is important in developing an appropriate intervention. An FBA identifies what behaviors may need to change and determines the cause or triggers of the behaviors. School staff can then prepare a behavior plan to prepare for and redirect problem behaviors.

### **How is an FBA completed?**

A person knowledgeable about behaviors, such as the school psychologist or behavior interventionist, observes your child at different times of the school day and in various settings to identify factors that may trigger troublesome behaviors.

Through interviews with you, your child's teachers and other school personnel who interact with your child, they are able to gather data that will help determine which interventions will work best in avoiding or redirecting problem behaviors. As a parent you play an important role in this process both as a source of information and as an ally in the implementation of interventions. A consistent approach to behavior management will be most effective for your child.

### **“Problem behaviors”**

Behaviors that cause the most problems in school are usually related to attention seeking, escape or response to environment.

If your child has emotional difficulties, she may feel the need to gain the attention of her teachers or peers but lack the skills to do it in a positive manner. Pushing or hitting classmates or having a tantrum becomes a means to getting attention. Refusing to work or bolting from the classroom may be your child's way of avoiding an undesirable task or activity. Understanding the function of the behavior will help school personnel and you determine alternative behaviors that your child can use to achieve the same end.

Your child may be extremely sensitive to environmental factors, such as noise, lighting and level of activity. If this is the case, reactions to environmental stressors can cause behaviors inappropriate to the setting. Making changes and accommodations to the classroom, cafeteria, or other school settings can help alleviate the stress. School personnel can teach your child appropriate techniques for coping with these stresses.

#### **If interventions don't work**

Sometimes observations and interviews do not provide enough information to really understand the cause of a problem behavior. In this case, you can request a functional behavioral analysis. A functional behavioral analysis is a more in-depth process than a FBA. If this type of in-depth look is needed it is important to have a qualified professional conduct the analysis. A trained Board Certified Behavioral Analyst (BCBA) is an example of a professional who could do this. By systematically controlling and changing environmental factors and observing resulting behaviors, the analyst can collect data that can contribute to the development of an effective prevention plan. Once triggers are identified, making simple changes to your child's environment or routine can eliminate or lessen the frequency or severity of the behaviors.

#### **The goal**

Most children can learn appropriate behavior skills. In order for your child to do so, you and the school need to understand problem behaviors, such as where they occur and what purpose they serve for your child. If you learn about the behaviors and know when and where they are likely to happen, you and the school can plan positive strategies to teach new behaviors. You and your child's teachers can use the information from an FBA to help your child learn new skills. The ultimate goal is to teach your child to manage her own behaviors.

#### **Resources**

##### [Building Effective Support for Teaching Students with Behavioral Challenges](#)

The BEST Project is designed to help schools develop effective strategies to respond to challenging student behaviors.

802-656-9656

##### [Vermont Federation of Families for Children's Mental Health](#)

Provides support and information to families of children with special needs regarding access to mental health services.

800-639-6071 or 802-876-7021

##### [Vermont I-Team](#)

The Center on Disability and Community Inclusion

Support for students with special education needs, their families, and their IEP team.

802-656-7122

##### [Vermont Positive Behavior Interventions and Supports \(VTPBiS\)](#)

A statewide effort designed to help school teams form a proactive, school-wide, systems approach to improving social and academic competence for all students.
