

Dental Care Puppet Program

What to expect:

Jason and Michael are doing a role play for a class project. Jason is pretending to be a dentist and is checking Mike's teeth. He talks with his "patient" about plaque, cavities and making healthy choices for his body, including his teeth.

Key Program Points:

- Plaque is bacteria that can build up on your teeth and cause tooth decay.
- You can take care of your teeth by brushing, flossing, and getting dental cleanings.
- You can also care for your teeth by choosing healthy food and limiting sugary treats to once in a while.
